

How to:

CAMTAINERS VS. HOT BOXES

Camtainers or Cam-carts are food pan carriers. They are portable, insulated containers useful for keeping hot food hot, and cold food cold for hours during transport. These are usually made of resin, and have several insulated layers and a locking door. Each unit typically holds up to four pans of hot/cold food.

Hot Boxes will hold pre-prepared food at a safe temperature until you are ready to serve your guests. Our models range in capacity from 8-32 pans in both electric and sterno varieties, depending on your venue's requirements.
